Contents

1 Introduction 1
- 1.1 Tasks for Photogrammetric Computer Vision 2
  - 1.1.1 Data Capture for GIS 2
  - 1.1.2 Vision Metrology 4
- 1.2 Modelling in Photogrammetric Computer Vision 6
  - 1.2.1 A Meta Model of Photogrammetric Computer Vision 6
  - 1.2.2 Models for Imaging and Interpretation 8
  - 1.2.3 Probabilistic and Statistical Reasoning 9
- 1.3 The Book 11
  - 1.3.1 The Structure of the Book 11
  - 1.3.2 How to Use This Book 12
- 1.4 On Notation 16

Part I Statistics and Estimation

2 Probability Theory and Random Variables 21
- 2.1 Notions of Probability 21
- 2.2 Axiomatic Definition of Probability 22
- 2.3 Random Variables 24
  - 2.3.1 Characterizing Probability Distributions 24
  - 2.3.2 Probability Density Function 26
  - 2.3.3 Continuous and Discrete Random Variables 26
  - 2.3.4 Vectors and Matrices of Random Variables 27
  - 2.3.5 Statistical Independence 28
- 2.4 Distributions 28
  - 2.4.1 Binomial Distribution 28
  - 2.4.2 Uniform Distribution 28
  - 2.4.3 Exponential and Laplace Distribution 29
  - 2.4.4 Normal Distribution 29
  - 2.4.5 Chi-Square Distribution 33
  - 2.4.6 Wishart Distribution 34
  - 2.4.7 Fisher Distribution 34
  - 2.4.8 Student's t-Distribution 35
- 2.5 Moments 36
  - 2.5.1 General Moments 36
  - 2.5.2 Central Moments 37
  - 2.5.3 Moments of Normally Distributed Variables 39
  - 2.5.4 Moments of the Uniform Distribution 39

2.6 Quantiles of a Distribution . . . 40
2.7 Functions of Random Variables . . . 40
2.7.1 Transformation of a Random Variable . . . 41
2.7.2 Distribution of the Sum of Two Random Variables . . . 42
2.7.3 Variance Propagation of Linear Functions . . . 42
2.7.4 Variance Propagation of Nonlinear Functions . . . 43
2.7.5 Implicit Variance Propagation . . . 43
2.7.6 Bias Induced by Linearization . . . 44
2.7.7 On the Mean and the Variance of Ratios . . . 46
2.7.8 Unscented Transformation . . . 47
2.8 Stochastic Processes . . . 48
2.8.1 Notion of a Stochastic Process . . . 48
2.8.2 Continuous Gaussian Processes . . . 50
2.8.3 Autoregressive Processes . . . 52
2.8.4 Integrated AR Processes . . . 54
2.9 Generating Random Numbers . . . 55
2.10 Exercises . . . 56

3 Testing . . . 61
3.1 Principles of Hypothesis Testing . . . 61
3.1.1 Classical Hypothesis Testing . . . 62
3.1.2 Bayesian Testing . . . 64
3.2 Testability of an Alternative Hypothesis . . . 65
3.2.1 Testability with Respect to the Mean of a Scalar . . . 65
3.2.2 Testability with Respect to the Mean of a Vector . . . 67
3.3 Common Tests . . . 69
3.3.1 Testing the Mean of a Gaussian Variable . . . 69
3.3.2 Testing the Variance of Gaussian Variables . . . 70
3.4 Exercises . . . 72

4 Estimation . . . 75
4.1 Estimation Theory . . . 75
4.1.1 Bayesian Estimators . . . 76
4.1.2 Maximum Likelihood Estimators . . . 78
4.1.3 Best Unbiased Estimators . . . 79
4.1.4 Least Squares Estimators . . . 79
4.1.5 Comparison of the Optimization Principles . . . 80
4.2 The Linear Gauss–Markov Model . . . 81
4.2.1 The Mathematical Model . . . 82
4.2.2 Estimation and Covariance Matrices . . . 84
4.2.3 Gauss–Markov Model with Unknown Variance Factor . . . 89
4.2.4 Estimation of Variance Components . . . 91
4.2.5 Bayesian Estimation in the Gauss–Markov Model . . . 93
4.2.6 Partitioning and Reduction of the Parameters . . . 94
4.2.7 Groups of Observations and Sequential Estimation . . . 96
4.2.8 Covariance Intersection . . . 98
4.3 Gauss–Markov Model with Constraints . . . 99
4.3.1 Estimation . . . 100
4.3.2 Gauss–Markov Model with Design Matrix Not of Full Rank . . . 101
4.3.3 Weak Constraints . . . 102
4.4 The Nonlinear Gauss–Markov Model . . . 102
4.4.1 The Nonlinear Gauss–Markov Model Without Constraints . . . 103

4.4.2 The Nonlinear Gauss–Markov Model with Constraints 104
4.5 Datum or Gauge Definitions and Transformations 108
4.5.1 Gauge and Datum 109
4.5.2 Gauge Constraints and Inner Precision 110
4.5.3 Imposing Gauge Constraints and Gauge Transformations 111
4.5.4 Gauge in a System Reduced to the Transformation Parameters . . . 113
4.6 Evaluation 115
4.6.1 Precision, Bias and Accuracy 116
4.6.2 Effect of Random Errors 117
4.6.3 Modelling Systematic and Gross Errors 122
4.6.4 Evaluation with Respect to Gross Errors 124
4.6.5 Evaluation with Respect to Systematic Errors 133
4.6.6 Effect of Errors in the Covariance Matrix 135
4.6.7 Model Selection 138
4.6.8 Checking the Implementation of the Estimation 139
4.7 Robust Estimation and Outlier Detection 141
4.7.1 Outlier Model 143
4.7.2 Preconditions for Robust Estimation Procedures 144
4.7.3 Robust Estimation of the Variance Factor 145
4.7.4 Robust Maximum Likelihood-Type Estimation 147
4.7.5 L_1-Norm Minimization 150
4.7.6 Complete Search for Robust Estimation 151
4.7.7 Random Sample Consensus (RANSAC) 153
4.7.8 Robust Estimation by Clustering 157
4.7.9 Rules for Choosing Robust Estimation Technique 158
4.8 Estimation with Implicit Functional Models 160
4.8.1 Algebraic Structure of the Functional Models 161
4.8.2 Estimation in the Gauss–Helmert Model with Constraints 163
4.8.3 Overview on Estimation Procedures 171
4.8.4 Filtering, Prediction and Collocation 174
4.9 Methods for Closed Form Estimations 176
4.9.1 Linearizing by Parameter Substitution 177
4.9.2 Problems Linear in the Parameters 177
4.10 Estimation in Autoregressive Models 183
4.11 Exercises 185

Part II Geometry

5 Homogeneous Representations of Points, Lines and Planes 195
5.1 Homogeneous Vectors and Matrices 195
5.1.1 Definition and Notation 195
5.1.2 A Short Course 197
5.2 Homogeneous Representations of Points and Lines in 2D 205
5.2.1 2D Point 206
5.2.2 2D Line 207
5.3 Homogeneous Representations in $\mathbb{P}^n$ 209
5.3.1 3D Point 210
5.3.2 Plane 211
5.3.3 1D Point 214
5.3.4 The Projective Space $\mathbb{P}^n$ 214
5.4 Homogeneous Representations of 3D Lines 216
5.4.1 Parametrization of the 3D Line 216

5.4.2 Homogeneous Coordinates of the 3D Line . . . 217
5.4.3 Homogeneous Matrix for the 3D Line . . . 218
5.4.4 The 3D Line at Infinity . . . 219
5.4.5 3D Line by Intersection of Planes . . . 220
5.5 On Plücker Coordinates for Points, Lines and Planes . . . 221
5.5.1 Plücker Coordinates for 2D Entities Derived from Points . . . 221
5.5.2 Plücker Coordinates for 2D Entities Derived from Lines . . . 224
5.5.3 Plücker Coordinates for 3D Points and Planes . . . 224
5.5.4 Plücker Coordinates for 3D Lines . . . 226
5.6 The Principle of Duality . . . 229
5.6.1 Dual Geometric Entities . . . 229
5.6.2 The Dual 3D Line . . . 233
5.6.3 Geometric Relations Between Dual Entities . . . 233
5.6.4 Relation to Grassmann–Cayley and Geometric Algebra . . . 234
5.7 Conics and Quadrics . . . 236
5.7.1 Conics . . . 236
5.7.2 Quadrics . . . 239
5.7.3 Singular Conics and Quadrics . . . 241
5.8 Normalizations of Homogeneous Vectors . . . 241
5.9 Canonical Elements of Coordinate Systems . . . 242
5.9.1 Visualization of $\mathbb{P}^2$ Using the Stereographic Projection . . . 243
5.9.2 Elements of a 2D Coordinate System . . . 243
5.9.3 Elements of a 3D Coordinate System . . . 244
5.10 Exercises . . . 245

6 Transformations . . . 247
6.1 Structure of Projective Collineations . . . 248
6.2 Basic Transformations . . . 250
6.2.1 Transformation of 2D Points . . . 250
6.2.2 Transformation of 3D Points . . . 255
6.2.3 Transformation of 1D Points . . . 257
6.2.4 Transformation of Lines and Hyperplanes . . . 258
6.2.5 Transformation of Conics and Quadrics . . . 260
6.2.6 Summary of Transformations . . . 260
6.3 Concatenation and Inversion of Transformations . . . 261
6.3.1 Inversion . . . 261
6.3.2 Concatenation . . . 261
6.4 Invariants of Projective Mappings . . . 266
6.4.1 Invariants and Equivariant Functions . . . 266
6.4.2 Invariants of Collineations and of Its Specializations . . . 268
6.4.3 The Cross Ratio . . . 268
6.4.4 Invariants of More General Configurations in 2D . . . 271
6.4.5 Fixed Points, Lines, and Planes of Autocollineations . . . 272
6.5 Perspective Collineations . . . 277
6.5.1 Perspective Autocollineations . . . 277
6.5.2 Conjugate Rotations . . . 281
6.6 Projective Correlations . . . 282
6.7 Hierarchy of Projective Transformations and Their Characteristics . . . 284
6.8 Normalizations of Transformations . . . 285
6.9 Conditioning . . . 286
6.10 Exercises . . . 287

7 Geometric Operations ... 291
7.1 Geometric Operations in 2D Space ... 292
7.1.1 Constructions in 2D ... 292
7.1.2 Geometric Relations in 2D ... 295
7.1.3 Distances and Angles in 2D ... 297
7.2 Geometric Operations in 3D Space ... 299
7.2.1 Constructions in 3D ... 300
7.2.2 Geometric Relations in 3D ... 304
7.2.3 Distances and Angles in 3D ... 308
7.3 Vector and Matrix Representations for Geometric Entities ... 311
7.3.1 Motivation ... 311
7.3.2 Matrix Representations of Points, Lines, and Planes ... 312
7.3.3 Vector Representations of Transformations and Conics ... 315
7.4 Minimal Solutions for Conics and Transformations ... 316
7.4.1 Selection of Independent Constraints ... 317
7.4.2 Affinity and Similarity ... 320
7.4.3 General Homographies in 2D and 3D ... 321
7.5 Exercises ... 322

8 Rotations ... 325
8.1 Rotations in 3D ... 325
8.1.1 Exponential Form of the Rotation Matrix ... 326
8.1.2 Elements of the Rotation Matrix for Representation ... 327
8.1.3 Rotations with Euler Angles ... 328
8.1.4 Rotation with Rotation Axis and Rotation Angle ... 331
8.1.5 Rotations with Quaternions ... 332
8.1.6 Differential Rotations ... 336
8.2 Concatenation of Rotations ... 337
8.3 Relations Between the Representations for Rotations ... 338
8.4 Rotations from Corresponding Vector Pairs ... 339
8.4.1 Rotation from Three Pairs of Orthonormal Vectors ... 339
8.4.2 Rotation from One, Two, and Three Pairs of Arbitrary Vectors ... 339
8.4.3 Approximation of a Matrix by a Rotation Matrix ... 340
8.5 Exercises ... 340

9 Oriented Projective Geometry ... 343
9.1 Oriented Entities and Constructions ... 344
9.1.1 Geometric Entities ... 344
9.1.2 Chiral Geometric Configurations ... 348
9.1.3 Orientation of Geometric Constructions ... 352
9.1.4 Signed Distances ... 354
9.2 Transformation of Oriented Entities ... 355
9.2.1 Projective Transformations ... 355
9.2.2 Affine and Quasi-affine Mappings ... 357
9.3 Exercises ... 358

10 Reasoning with Uncertain Geometric Entities ... 359
10.1 Motivation ... 360
10.2 Representing Uncertain Geometric Elements ... 364
10.2.1 Using Uncertain Homogeneous Coordinates ... 365
10.2.2 Uncertain Homogeneous Coordinate Vectors ... 366
10.2.3 Uncertain Transformations ... 381

10.3 Propagation of the Uncertainty of Homogeneous Entities 386
10.3.1 Uncertain Geometric Elements and Transformations 386
10.3.2 Equivalence of Uncertain Homogeneous Vectors 390
10.4 Evaluating Statistically Uncertain Relations 393
10.5 Closed Form Solutions for Estimating Geometric Entities 395
10.5.1 Motivation 395
10.5.2 Directly Estimating 2D Lines and Planes 396
10.5.3 Directly Estimating 2D and 3D Points 401
10.5.4 Directly Estimating Transformations 406
10.5.5 Best Fitting 3D Line 411
10.6 Iterative Solutions for Maximum Likelihood Estimation 414
10.6.1 Estimation on Curved Manifolds with Reduced Coordinates 415
10.6.2 Vanishing Point Determination 417
10.6.3 Estimating a Homography from Corresponding Points 424
10.6.4 Estimating a Symmetric Roof from a Point Cloud 429
10.7 Exercises 432

Part III Orientation and Reconstruction

11 Overview 441
11.1 Scene, Camera, and Image Models 441
11.1.1 Modelling the Image Acquisition and Analysis Process 441
11.1.2 Geometric Scene Models 442
11.1.3 Geometric Camera Models 443
11.1.4 Geometric Image Models 447
11.1.5 Models for Geometric Image Analysis and Interpretation 448
11.2 The Setup of Orientation, Calibration, and Reconstruction 449
11.2.1 Estimation Tasks 449
11.2.2 Prediction and Testing Tasks 451
11.2.3 Aspects of Orientation and Reconstruction 451
11.3 Exercises 453

12 Geometry and Orientation of the Single Image 455
12.1 Geometry of the Single Image 456
12.1.1 Basic Terms About Perspective Images 456
12.1.2 General Aspects on Modelling the Projection 459
12.1.3 Modelling Central Cameras 465
12.1.4 Extending the Perspective Projection Model 476
12.1.5 Overview on the Different Camera Models 479
12.1.6 Mapping of Straight 3D Lines 480
12.1.7 Inverse Relations 482
12.1.8 Mapping of Curved 3D Lines 484
12.1.9 Nonstraight Line-Preserving Mappings 484
12.2 Orientation of the Single Image 489
12.2.1 Uncertainty of Image and Scene Observations 490
12.2.2 Estimating the Direct Linear Transformation for Orientation 494
12.2.3 Modelling Distortions 505
12.2.4 Spatial Resection 513
12.2.5 Theoretical Precision of Pose Estimation 521
12.3 Inverse Perspective and 3D Information from a Single Image 523
12.3.1 Uncertainty of Projection Rays 524
12.3.2 Reconstructing Points on Planes 524

12.3.3 Position of a 3D Line Segment Using Triangulation . . . 528
12.3.4 Using Vanishing Points . . . 529
12.3.5 3D Circle Reconstructed from Its Image . . . 534
12.4 Exercises . . . 537

13 Geometry and Orientation of the Image Pair . . . 547
13.1 Motivation . . . 547
13.2 The Geometry of the Image Pair . . . 549
13.2.1 Number of Parameters . . . 550
13.2.2 Coplanarity Constraints for Images of Uncalibrated Cameras . . . 552
13.2.3 Coplanarity Constraint for Images of Calibrated Cameras . . . 555
13.2.4 The Normal Case of the Image Pair . . . 561
13.2.5 Epipolar Geometry . . . 562
13.2.6 Generating Normalized Stereo Pairs . . . 565
13.2.7 Homography and Homology Induced by a Plane . . . 567
13.3 Relative Orientation of the Image Pair . . . 568
13.3.1 Uncertainty of Corresponding Image Points . . . 569
13.3.2 Direct Solutions for the Relative Orientation . . . 570
13.3.3 Orientation Parameters from a Given Essential Matrix . . . 581
13.3.4 Iterative Solution for Uncalibrated Cameras . . . 583
13.3.5 Iterative Solution for Calibrated Cameras . . . 585
13.3.6 Orientation and the Normal Case . . . 588
13.3.7 Projection Matrices from Relative Orientation . . . 594
13.4 Triangulation . . . 596
13.4.1 Reconstruction of 3D Points . . . 596
13.4.2 Reconstruction of 3D Lines . . . 605
13.5 Absolute Orientation and Spatial Similarity Transformation . . . 607
13.6 Orientation of the Image Pair and Its Quality . . . 608
13.6.1 Overview . . . 608
13.6.2 Comparison of the Solutions . . . 610
13.6.3 Synopsis . . . 614
13.7 Exercises . . . 615

14 Geometry and Orientation of the Image Triplet . . . 621
14.1 Geometry of the Image Triplet . . . 622
14.1.1 Number of Parameters . . . 622
14.1.2 The Coplanarity Constraints of the Image Triplet . . . 623
14.1.3 The Trifocal Tensor . . . 625
14.1.4 Predictions and Constraints for Points and Lines . . . 629
14.2 Relative Orientation of the Image Triplet . . . 632
14.2.1 Sequential Relative Orientation of the Image Triplet . . . 633
14.2.2 Direct Solutions for the Trifocal Tensor . . . 636
14.2.3 Iterative Solution for the Triplet . . . 637
14.3 Exercises . . . 641

15 Bundle Adjustment . . . 643
15.1 Motivation for Bundle Adjustment and Its Tasks . . . 644
15.2 Block Adjustment . . . 645
15.2.1 General Setup of Block Adjustment . . . 646
15.2.2 Examples for Block Adjustments . . . 648
15.3 Sparsity of Matrices, Free Adjustment and Theoretical Precision . . . 651
15.3.1 The Mathematical Model of 2D Block Adjustment . . . 651

15.3.2 The Optimization Function 654
15.3.3 Sparse Structure of Matrices 655
15.3.4 Free Block Adjustment 663
15.3.5 Theoretical Quality of Regular Strips and Blocks 670
15.4 Self-calibrating Bundle Adjustment 674
15.4.1 Bundle Adjustment for Perspective Cameras 675
15.4.2 Bundle Adjustment for Spherical Cameras 686
15.4.3 Evaluating Bundle Adjustment Results 687
15.5 Camera Calibration 696
15.5.1 Self-calibration with an Unknown 3D Test Field 698
15.5.2 Evaluating Additional Parameters 699
15.5.3 Unmodelled Systematic Errors 700
15.5.4 Effect of Unmodelled Systematic Errors 701
15.5.5 Instability of Systematic Errors and Their Effect 702
15.5.6 An Example for Evaluating Calibration Parameters 702
15.6 Outlier Detection and Approximate Values 707
15.6.1 Outlier Detection 707
15.6.2 Sequential Solutions for Determining Approximate Values 708
15.6.3 Direct Solutions for Block Adjustment 711
15.7 View Planning 715
15.7.1 Goals, Boundary Conditions, and Rules of Thumb 716
15.7.2 Large Flat Areas 718
15.7.3 Buildings and Indoor Environments 721
15.8 Exercises 722

16 Surface Reconstruction 727
16.1 Introduction 727
16.1.1 On the Definition of Surfaces 727
16.1.2 Models for Surfaces 728
16.1.3 Tasks to Be Solved 729
16.2 Parametric $2^1/_2$D Surfaces 733
16.2.1 Modelling $2^1/_2$D Surfaces 733
16.2.2 Regularity Measures for Functions and $2^1/_2$D Surfaces 739
16.3 Models for Reconstructing One-Dimensional Surface Profiles 742
16.3.1 Surface Reconstruction as Bayesian Estimation 742
16.3.2 The Choice of the Smoothness Prior Revisited 748
16.3.3 Changing the Grid Spacing 753
16.3.4 Violations of the Basic Model 754
16.4 Reconstruction of $2^1/_2$D Surfaces from 3D Point Clouds 757
16.4.1 Surface Reconstruction with a General Continuous Prior 758
16.4.2 Smooth Surface Reconstruction 759
16.4.3 The Optimization 760
16.4.4 Theoretical Precision of Reconstructed Surfaces 763
16.5 Examples for Surface Reconstruction 763
16.6 Exercises 765

Appendix: Basics and Useful Relations from Linear Algebra 767
A.1 Inner Product 767
A.2 Determinant 767
A.2.1 Definition of the Determinant 767
A.2.2 Laplacian Development of a Determinant 767
A.2.3 Determinant of a Block Matrix 769

A.3 Inverse, Adjugate, and Cofactor Matrix . . . 769
A.4 Skew Symmetric Matrices . . . 770
A.4.1 2×2 Skew Matrix . . . 770
A.4.2 3×3 Skew Matrix . . . 771
A.5 Eigenvalues . . . 772
A.5.1 Eigenvalues of Matrix Products . . . 773
A.5.2 Eigenvalues of Sub-blocks of a Matrix and Its Inverse . . . 773
A.6 Idempotent Matrices . . . 774
A.7 Kronecker Product, vec(·) Operator, vech(·) Operator . . . 775
A.8 Hadamard Product . . . 776
A.9 Cholesky and QR Decomposition . . . 776
A.10 Singular Value Decomposition . . . 777
A.11 The Null Space and the Column Space of a Matrix . . . 777
A.12 The Pseudo-inverse . . . 779
A.12.1 The Pseudo-inverse of a Rectangular Matrix . . . 779
A.12.2 Pseudo-inverse of a Singular Symmetric Matrix . . . 779
A.12.3 The Pseudo-inverse of a Rectangular Matrix Having Full Rank . . . 780
A.12.4 The Weighted Pseudo-inverse of a Rectangular Matrix Having Full Rank . . . 780
A.13 Matrix Exponential . . . 781
A.14 Tensor Notation . . . 782
A.15 Variance Propagation of Spectrally Normalized Matrix . . . 783

References . . . 785
